## Easyjet develops flying robots to inspect aircraft

The drones will be used to scan and assess Easyjet planes

**Easyjet is developing drones to inspect its fleet of Airbus aircraft, and may introduce the flying maintenance robots as early as next year.**

The drones will be used to scan and assess Easyjet planes and report damage back to engineers.

The flying robots are being developed by a team that includes experts from the University of Bristol.

Easyjet is also developing virtual reality video technology.

In addition, Easyjet wants apps to help with maintenance, and the airline is fitting "paperless plane" technology. Durable laptop computers will replace printed navigational charts in planes.
